Hello, I created a **Power BI dashboard** to analyze Wellmart sales data and understand customer behavior and sales patterns.

After analyzing the dataset, I identified several key insights:

Store Performance:

Store **20 is the top-performing store**, generating approximately **301M in revenue** over the three-year period.

On the other hand, **Store 33 is the lowest-performing store**, generating only **33M in revenue** during the same period.

Year-wise Analysis:

When analyzing revenue by year, **2011 generated the highest revenue of about 2448M**, making it the best-performing year.

In contrast, **2012 recorded the lowest revenue of around 2000M**, indicating a slight decline compared to previous years.

Month-wise Analysis:

From the monthly sales analysis, **July generated the highest revenue of approximately 650M**, showing strong seasonal demand.

The **lowest-performing month was November**, generating around **413M in revenue**.

Holiday Impact:

The analysis also shows that **holiday weeks generate higher average sales compared to non-holiday weeks**, indicating increased customer spending during holiday periods.
